

Did you know that indoor air can be more polluted than the outdoor air in a big city?

If you're in a closed room, you could be inhaling "VOCs" – emissions from plastics, paint, synthetic carpet, vinyl, cleaning products, smoke residue, and more. You can't see or smell all volatile organic compounds, but even low levels can be harmful to your health.

Indoor Air Monitor Plugs Into USB Port

Now there's an affordable, easy-to-use personal air monitor that warns you if the air around you is polluted. Simply plug the Indoor Air Monitor into the USB port of your PC. Within minutes, it will glow green if the air quality is good, yellow if it's fair and red if you need to ventilate the room immediately.

The Indoor Air Monitor is made by AppliedSensor, a respected manufacturer with more than a decade of experience producing commercial air monitors. It includes a one-year warranty and link to free software you can download to display real-time changes to indoor air on your computer screen.

The Indoor Air Monitor is available from these fine distributors:

U.S. & Canada

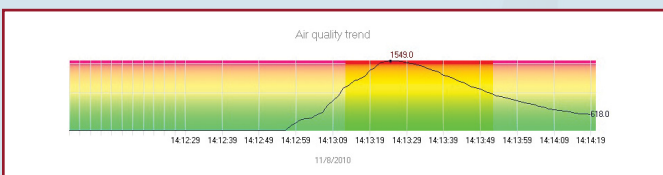

- Butterfly Energy Works (Air Monitor #001)
- Dwyer Instruments (AQStick™ #AQS-1)
- Nasco Science Supplies (#SB47411M)
- Smarthome (Indoor Air Monitor #77-0900)
- SupportTechs (Indoor Air Monitor)

Europe

- Conrad Electronic
- FRAKTA Vertriebs-GmbH
- MSR Electronic GmbH
- Sentinel Haus Institut
